

# Hosting Factsheet

We are proud to offer website hosting on Australian based servers and our competitive rates mean that there is absolutely no reason to compromise with American based servers.

Our priority is to provide you with a balance of competitive pricing and premium customer support and service. We place great value on always being there to answer any questions and to make sure your website and emails always work.

We offer FREE SPAM Filtering and DNS Management and our bulk buying power means we are also able to tailor smaller or larger packages to meet any hosting need.

If you are looking for professional website hosting backed by a team that not only hosts websites but designs, builds, and maintains them, look no further.
